FACULTY

Introduction

In my role as a Student Digital Ambassador, I assisted my fellow students in becoming more assured and at ease with the use of technology in their lives. I have undertaken a project to create a Digital Literacy Portfolio. This portfolio helps to learn how to make use of the internet effectively. In the course of the project, I made project on tasks that reflect my knowledge of digital tools, online interaction, and internet security. It guided me more on being respectful, skilled, and aware while conducting myself online. The portfolio tasks are five in total. They are about creating a professional digital profile, trying out coding and collaboration platforms, using emails appropriately, and the risks associated with cybercrime.

My project is stored in a GitHub repository. It was to act as a record of my learning. It helped in the development of my skills, communication, and understanding of the responsibilities that come with social media and internet . I have learned that I need to be more careful while using the internet. This project helped me become a better digital citizen. I am happy that I have received this experience of a Student Digital Ambassador.

Task 1 Write-up

To create a digital literacy awareness infographic, I used Canva (for this task). I did not use any ready-made template but created I digital literacy awareness infographic from scratch regarding its structure and content based on my knowledge. The infographic is titled 'Digital Literacy for Students', and the aspects discussed here include the meaning of digital literacy, useful digital tools, safe practices in internet surfing, digital presence, and email etiquette.

There is a section in the design of what digital literacy entails, highlighting skills such as knowing how to use digital tools, identifying misinformation, and ensuring online safety. It also presents the most often used instruments such as Google Docs, Excel, ChatGPT, and YouTube. In addition, I have added the use of strong passwords, avoiding suspicious links, and the use of two-factor authentication as important safety practices. There is also a segment on digital presence and appropriate email etiquette to encourage responsible use of online communication.

One interesting and a little bit hard part of this task was to design the layout without using a template.

Task 2 Write-up

In this task, I have created a student digital portfolio on GitHub, LinkedIn, and Kaggle. These platforms are important for creating an online professional portfolio. I created a profile on GitHub, and I created a README file that describes my academic background, learning interests, and career goals. Over a lifetime this would help in maintaining records for enhancement in programming skills.

I created a LinkedIn profile and entered the details of my education, such as B.Tech in computer science at the VIT Bhopal institute and my expected graduation year. LinkedIn will help me to connect with professionals, know about the opportunities and updates of the industry.

Additionally, I created a Kaggle account, through which I can delve into data science and machine learning via datasets and competitions.

Over the next four years, I plan on actively using these platforms to create a strong portfolio, enhance my technical skills, and engage in learning communities. I will also develop a professional identity for myself through these platforms and avail career opportunities like internships.

Task 3 Write-up

In this task, I looked at both a platform for coding practice and a collaboration platform. For the coding practice part, I created an account on HackerRank and solved a beginner's level problem that allowed me to understand the basic coding logic and the technique of using algorithms to solve problems. Not only does practising on such platforms enhance coding skills, but it also helps in cultivating confidence towards solving real-world problems.

As for the collaboration part, Google Forms is used to make "Digital Literacy Awareness Quiz" with five questions. The questions were a mix of multiple-choice and short answers, intended to check for very basic understanding of digital literacy among the students. I viewed the responses using Google Sheets, which further aided me in understanding the mechanism of forming and analyzing data.

Academically these are very much fruitful. HackerRank will help me regular coding practice and preparation for technical interviews, whereas Google Forms and Sheets will be efficient tools for organizing information, creating surveys, and working with others. Overall, I got to know the practicum digital tools I can use throughout my academic life with this task.

Task 4 Write-up

One situation, which can result in problems due to poor digital communication, is when a student sends an e-mail to a professor without a subject line, a greeting, or an explanation of what is happening clearly stated. For example, writing small and unclear words can be rude and confusing.

This issue could be avoided by following email etiquette. This can be done by having a clear subject in the email, a polite salutation, and a clear structure in the email itself to convey the purpose of the email. Using a respectful tone and offering details required ensures professional and efficient communication.

This task taught me that tone, clarity, and other small attributes of communication make a big impact on first impressions, communication, and smooth interaction in academic and professional fields.

The Cost of Digital Miscommunication

A common situation where poor digital communication causes real problems is the misinterpretation of tone in professional emails. In one instance, a manager sent a brief, all-caps message: "WE NEED THE PROJECT BY 5 PM." Without the context of vocal tone or body language, the team interpreted this as aggressive and panicked. This led to high stress, a rushed final product with several errors, and a breakdown in team morale.

To prevent this, the manager could have used better digital etiquette. Instead of all-caps—which is digitally perceived as shouting—they could have used a collaborative tone: "Hi team, just a reminder that the deadline is 5 PM today. Let me know if you need any support." Additionally, for urgent or complex requests, a quick video call would have provided the necessary clarity and emotional context that text lacks.

Task 5 Write-up

I got a shock of my life while researching cybercrime and realising how easily people can be duped of their money through UPI fraud owing to their poor awareness of the subject. Many users do not realize that entering a pin in UPI is necessary only when sending money, not receiving it. This small misunderstanding is often the cause of the loss of money.

One major habit that I will effectively change is being more careful when handling payment requests and messages from unknown sources. I will verify the authenticity of the requests before I take any action and never click on suspicious links.

This task has helped me understand the importance of digital awareness and the responsibilities of life in the digital world. Also, my confidence level in advising a person on how to counteract a cyber threat increased.

Conclusion

This project provided valuable insights into digital literacy, professional presence, and online safety. I learned how to use important platforms, communicate effectively, and stay aware of cyber threats. These skills are essential for both academic growth and future career development. Overall, the project enhanced my confidence in using digital tools responsibly and efficiently.
